

Properties	Test methods	Units	Values	
Productname	-	-	Acetron® MD*	
Color	-	-	blue	
Average molar mass (average molecular veight)	-	10 ⁶ g / mol		
Density	ISO 1183-1	g / cm³	1,460	
Vater apsorption		g , c	_,	
after 24/96 h immersion in water of	100.00		10 / 27	
23°C (1) • after 24/96 h immersion in water of	ISO 62	mg	19 / 37	
23°C (1)	ISO 62	%	0,21/0,40	
• at saturation in air of 23°C / 50% RH	-	%	0,19	
 at saturation in water of 23°C 	-	%	0,75	
HERMAL PROPERTIES (2)				
lelting temperature (DSC, 10°C/min)	ISO 11357-1/-3	°C	165	
ynamic glass transition temperature +	ISO 3146	°C		
ynamic glass transition temperature ++	ISO 3146	°C		
hermal conductivity Lambda λ at 23°C	-	W / (K · m)	0,310	
oefficient of linear thermal expansion				
average value between 23 and 60°C	-	m / (m · K)	115 × 10 ⁻⁶	
average value between 23 and 100°C	-	m / (m · K)	130 x 10 ⁶	
 average value between 23 and 150°C 		m / (m · K)		
emperature of deflection under load				
• method A: 1,8 MPa	ISO 75-1/-2	°C	100	
icat-Erweichungstemperatur - VST/B50	ISO 306	°C		
laximal allowable service temperature in		20	140	
• for short periods (3)	-	°C	140	
• continously: for 5.000 / 20.000 h (4)	-	° C	105 / 90	
inimal service temperature (5)	-	°C	-30	
Iammability (6)	ISO 4589-1/-2	%	< 20	
Oxygen-Index according to UL 94 (3 / 6 mm	130 4303-1/-2	70		
thickness)	-		HB / HB	
pecific heat capacity	-	J / (g · K)		
IECHANICAL PROPERTIES AT 23°C (7)				
ension test (8)				
 tensile stress at yield / tensile stress at break (9) + 	ISO 527-1/-2	N / mm²	66 / -	
 tensile stress at yield / tensile stress at break (9) ++ 	ISO 527-1/-2	N / mm²	66 / -	
• tensile strength (9) +	ISO 527-1/-2	N / mm ²	66	
• tensile strain at yield (9) +	ISO 527-1/-2	%	14	
• tensile strain at break / elongation at break (9) +	ISO 527-1/-2	%	15	
 tensile strain at break / elongation at break (9) ++ 	ISO 527-1/-2	%	15	
• tensile modulus of elasticity (10) +	ISO 527-1/-2	N / mm²	2950	
• tensile modulus of elasticity (10) ++	ISO 527-1/-2	N / mm²	2950	
ompression test (11)				
 compressive stress at 1/2/5 % nominal strain (12) + 	ISO 604	N / mm²	25 / 44 / 76	
reep test in tension (8)				
stress to produce 1% strain		N /		
	ISO 899-1	N / mm²		
stress to produce 1% strain (σ 1/1000)	ISO 899-1 ISO 899-1	N / mm		
			70	
harpy impact strenght - Unnotched (12)	ISO 899-1	N / mm²	70	
harpy impact strenght - Unnotched (12) harpy impact strenght - Notched harpy impact strength (15° V-notched,	ISO 899-1 ISO 179-1/1eU	N / mm² kJ / m²	70 5	
harpy impact strenght - Unnotched (12) harpy impact strenght - Notched harpy impact strength (15° V-notched, oth-sided)	ISO 899-1 ISO 179-1/1eU ISO 179-1/1eA ISO 11542-2	N / mm² kJ / m² kJ / m² kJ / m²		
harpy impact strenght - Unnotched (12) harpy impact strenght - Notched harpy impact strength (15° V-notched, oth-sided) cod impact strength - Notched +	ISO 899-1 ISO 179-1/1eU ISO 179-1/1eA ISO 11542-2 180/2A	N / mm² kJ / m² kJ / m² kJ / m²		
Charpy impact strenght - Unnotched (12) Charpy impact strenght - Notched Charpy impact strength (15° V-notched, ioth-sided) zod impact strength - Notched + zod impact strength - Notched ++	ISO 899-1 ISO 179-1/1eU ISO 179-1/1eA ISO 11542-2 180/2A 180/2A	N / mm² kJ / m² kJ / m² kJ / m² kJ / m² kJ / m²	5	
harpy impact strenght - Unnotched (12) harpy impact strenght - Notched harpy impact strength (15° V-notched, oth-sided) zod impact strength - Notched + zod impact strength - Notched ++ iall intentation hardness (13)	ISO 899-1 ISO 179-1/1eU ISO 179-1/1eA ISO 11542-2 180/2A 180/2A 2039-1	N / mm² kJ / m² kJ / m² kJ / m² kJ / m² kJ / m² kJ / m²	5 155	
Charpy impact strength - Unnotched (12) Charpy impact strength - Notched Charpy impact strength (15° V-notched, both-sided) zod impact strength - Notched + Zod impact strength - Notched ++ Sall intentation hardness (13) Rockwell hardness (134) Shore hardness D (3 / 15 s)	ISO 899-1 ISO 179-1/1eU ISO 179-1/1eA ISO 11542-2 180/2A 180/2A	N / mm² kJ / m² kJ / m² kJ / m² kJ / m² kJ / m²	5

ELECTRICAL PROPERTIES AT 23°C

ELECTRICAL PROPERTIES AT 23°C				
Electric strength (15)	IEC 60243-1	kV / mm		
Electric strength (15) ++	IEC 60243-1	kV / mm		
Volume resistivity +	IEC 60093	$\Omega\cdot cm$	> 10 ¹³	
Volume resistivity ++	IEC 60093	$\Omega\cdot cm$	> 10 ¹³	
Surface resistivity +	IEC 60093	Ω	> 10 ¹²	
Surface resistivity ++	IEC 60093	Ω	> 10 ¹²	
Relative permittivity ɛ				
• at 100 Hz +	IEC 60250	-		
• at 100 Hz ++	IEC 60250	-		
• at 1 MHz +	IEC 60250	-		
• at 1 MHz ++	IEC 60250	-		
Dielectric dissipation factor tan Delta δ				
• at 100 Hz +	IEC 60250	-		
• at 100 Hz ++	IEC 60250	-		
• at 1 MHz +	IEC 60250	-		
• at 1 MHz ++	IEC 60250	-		
Comparative tracking index (CTI) +	IEC 60112	<u> </u>		
omparative tracking index (CTI) ++	IEC 60112	- -		
Sinparative dracking index (CII) TT		-		

Legend

- 1. Following the ISO 62 written procedures \emptyset 50 x 3 mm.
- 2. The values listed for properties are largely taken from the material sheets supplied by raw material suppliers and other publications.
- 3. The properties listed are all values for semi-crystalline materials, and not amorphous materials.
- 4. Valid for just a few hours of thermal stress for applications where there is little or no mechanical stress.
- 5. Quoted thermal stability over 5,000 / 20,000 hours. Beyond this period, the tensile strength decreases to around 50% of the initial value. As with all thermoplastics, the maximum permissible operating temperature is in many cases primarily dependent on the duration and magnitude of the mechanical stress which occurs during exposure to heat.
- 6. In view of the reduction in impact strength with decreasing temperature, the lower service temperature limit is in practice particularly determined by the magnitude of the impact stress applied to the material. The values listed here are based on adverse shock loads and should not be considered an absolute practical limit.
- 7. It should be noted that these values, which have been estimated from the material sheets provided by raw material suppliers, must under no circumstances be taken as a guide to behaviour or reaction when the material is subject to fire. There are no "UL Yellow Cards" for these semi-finished products.
- The data given for dry material (+) are mostly average values of tests carried out on test specimens consisting of round bars Ø40 - 60 mm. Considering the very low water absorption of POM, PET and PC, the values for the mechanical and electrical properties of dry (+) and damp (++) specimens of these materials can be considered almost equal.
- 9. Test piece: Type 1 B
- 10. Test speed: 20 mm/min. (5 mm/min for PA6.6 + GF, POM-C + PTFE and PET TX)
- 11. Test speed: 1 mm/min.
- 12. Test specimen: cylinder (Ø 12 x 30mm)
- 13. Pendulum used: 15 J.
- 14. Measured on 10-mm thick test specimens
- 15. Electrode configuration: two cylinders Ø 25 / Ø 75 mm; in transformer oil according to IEC 296; measured on 1-mm thick natural specimens. It is important to know that the dielectric strength of black extruded material (PA6, PA6.6, POM and PET) can be up to 50% lower than that of natural-coloured material. A possible microporosity in the centre of POM semi-finished products also results in a significant reduction in dielectric strength. This table is intended to assist you in selecting materials. The values listed here are within the usual range of product properties. However, they are not guaranteed property values and should not be used as the sole basis for construction. It should be noted that PA6.6 + GF is a fibre-reinforced material which is therefore considered anisotropic (properties are different dependent upon whether the fibres are parallel or perpendicular to the extrusion direction)
