

Properties	Test methods	Units	Values	
Productname	-	-	TIVAR® SuperPlus*	
Color	-	-	grey, silver	
Average molar mass (average molecular weight)	-	10 ⁶ g / mol	9,00	
Density	ISO 1183-1	g / cm³	0,960	
Water apsorption		9,	-,	
after 24/96 h immersion in water of	150.53			
23°C (1) • after 24/96 h immersion in water of	ISO 62	mg		
23°C (1)	ISO 62	%		
at saturation in air of 23°C / 50% RH	-	%		
at saturation in water of 23°C	-	%	0,02	
THERMAL PROPERTIES (2)				
Melting temperature (DSC, 10°C/min)	ISO 11357-1/-3	°C	135	
Dynamic glass transition temperature +	ISO 3146	°C		
Dynamic glass transition temperature ++	ISO 3146	°C		
Thermal conductivity Lambda λ at 23°C	-	W / (K ⋅ m)	0,400	
Coefficient of linear thermal expansion				
• average value between 23 and 60°C	-	m / (m · K)		
\bullet average value between 23 and 100°C	-	m / (m \cdot K)	200 x 10 ⁻⁶	
• average value between 23 and 150°C	-	m / (m · K)		
Temperature of deflection under load				
• method A: 1,8 MPa	ISO 75-1/-2	°C	42	
Vicat-Erweichungstemperatur - VST/B50	ISO 306	°C	80	
Maximal allowable service temperature in	air			
for short periods (3)	-	°C	120	
• continously: for 5.000 / 20.000 h (4)	-	°C	- / 80	
Minimal service temperature (5)	-	°C	-150	
Flammability (6)				
Oxygen-Index	ISO 4589-1/-2	%	< 20	
according to UL 94 (3 / 6 mm thickness)	-		HB / HB	
Specific heat capacity	-	J / (g · K)		
MECHANICAL PROPERTIES AT 23°C (7))/(g K)		
Tension test (8)				
relision test (o)			17.

Comparative tracking index (CTI) ++	IEC 60112	-		

Legend

- 1. Following the ISO 62 written procedures Ø 50 x 3 mm.
- 2. The values listed for properties are largely taken from the material sheets supplied by raw material suppliers and other publications.
- 3. The properties listed are all values for semi-crystalline materials, and not amorphous materials.
- 4. Valid for just a few hours of thermal stress for applications where there is little or no mechanical stress.
- 5. Quoted thermal stability over 5,000 / 20,000 hours. Beyond this period, the tensile strength decreases to around 50% of the initial value. As with all thermoplastics, the maximum permissible operating temperature is in many cases primarily dependent on the duration and magnitude of the mechanical stress which occurs during exposure to heat.
- 6. In view of the reduction in impact strength with decreasing temperature, the lower service temperature limit is in practice particularly determined by the magnitude of the impact stress applied to the material. The values listed here are based on adverse shock loads and should not be considered an absolute practical limit.
- 7. It should be noted that these values, which have been estimated from the material sheets provided by raw material suppliers, must under no circumstances be taken as a guide to behaviour or reaction when the material is subject to fire. There are no "UL Yellow Cards" for these semi-finished products.
- 8. The data given for dry material (+) are mostly average values of tests carried out on test specimens consisting of round bars Ø40 60 mm. Considering the very low water absorption of POM, PET and PC, the values for the mechanical and electrical properties of dry (+) and damp (++) specimens of these materials can be considered almost equal.
- 9. Test piece: Type 1 B
- 10. Test speed: 20 mm/min. (5 mm/min for PA6.6 + GF, POM-C + PTFE and PET TX)
- 11. Test speed: 1 mm/min.
- 12. Test specimen: cylinder (Ø 12 x 30mm)
- 13. Pendulum used: 15 J.
- 14. Measured on 10-mm thick test specimens
- 15. Electrode configuration: two cylinders Ø 25 / Ø 75 mm; in transformer oil according to IEC 296; measured on 1-mm thick natural specimens. It is important to know that the dielectric strength of black extruded material (PA6, PA6.6, POM and PET) can be up to 50% lower than that of natural-coloured material. A possible microporosity in the centre of POM semi-finished products also results in a significant reduction in dielectric strength. This table is intended to assist you in selecting materials. The values listed here are within the usual range of product properties. However, they are not guaranteed property values and should not be used as the sole basis for construction. It should be noted that PA6.6 + GF is a fibre-reinforced material which is therefore considered anisotropic (properties are different dependent upon whether the fibres are parallel or perpendicular to the extrusion direction)
